

# PROJECT DEVELOPMENT PHASE

## SPRINT 1 – CODE AND TESTCASE

<b>Date</b>	10 November 2022
<b>Team ID</b>	PNT2022TMID02840
<b>Project</b>	Flight delay prediction using Machine learning
<b>Marks</b>	8 Marks

We have developed web based application Home Page which helps the User to Predict their flight with the help of details such as Flight number, Origin, Destination etc... The User will enter the flight details and with the help of the details the machine learning will work and it display the predicted output in “predict.html” web page.

## SEARCH :

### Index.html :

This page is used to get flight details from the User and send to “predict.html”.

```

# HOMEPAGE SCREENSHOT :

The screenshot shows a web application interface for flight prediction. The background is a photograph of an Air New Zealand aircraft in flight against a clear blue sky. Overlaid on this is a white, rounded rectangular form with a light gray border. The form contains several input fields and a 'Predict' button. The labels for the fields are in a bold, italicized font. The input fields are light blue with rounded corners. The 'Predict' button is blue with a white right-pointing arrow and the word 'Predict' in white text.

**Flight Number :**  
1399

**Month :**  
1

**Day Of Month :**  
1

**Day Of Week :**  
6

**Origin :**  
msp

**Destination :**  
sba

**Scheduled Departure Time :**  
22

**Scheduled Arrival Time :**  
215

**Actual Departure Time :**  
295

 Predict

## VIEW :

### Predict.html :

With the help of this page, the User will get an machine learning predicted output with respect to User's flight details.

```
